Dino MiniWorld

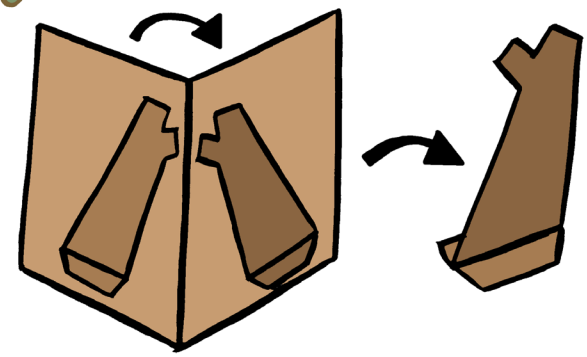
Fold and glue together (be careful not to glue the small tabs together), then cut out the branch.

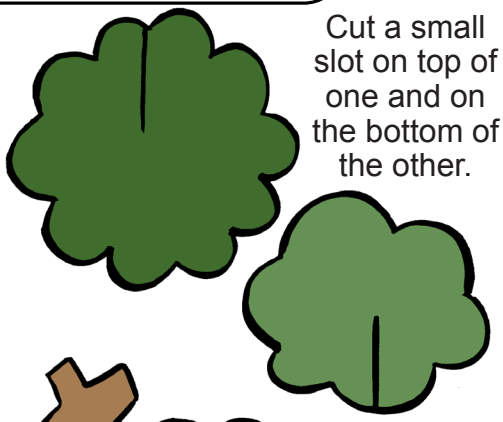


For the foliage, use different colors of paper that you cut into small bushes as shown here.

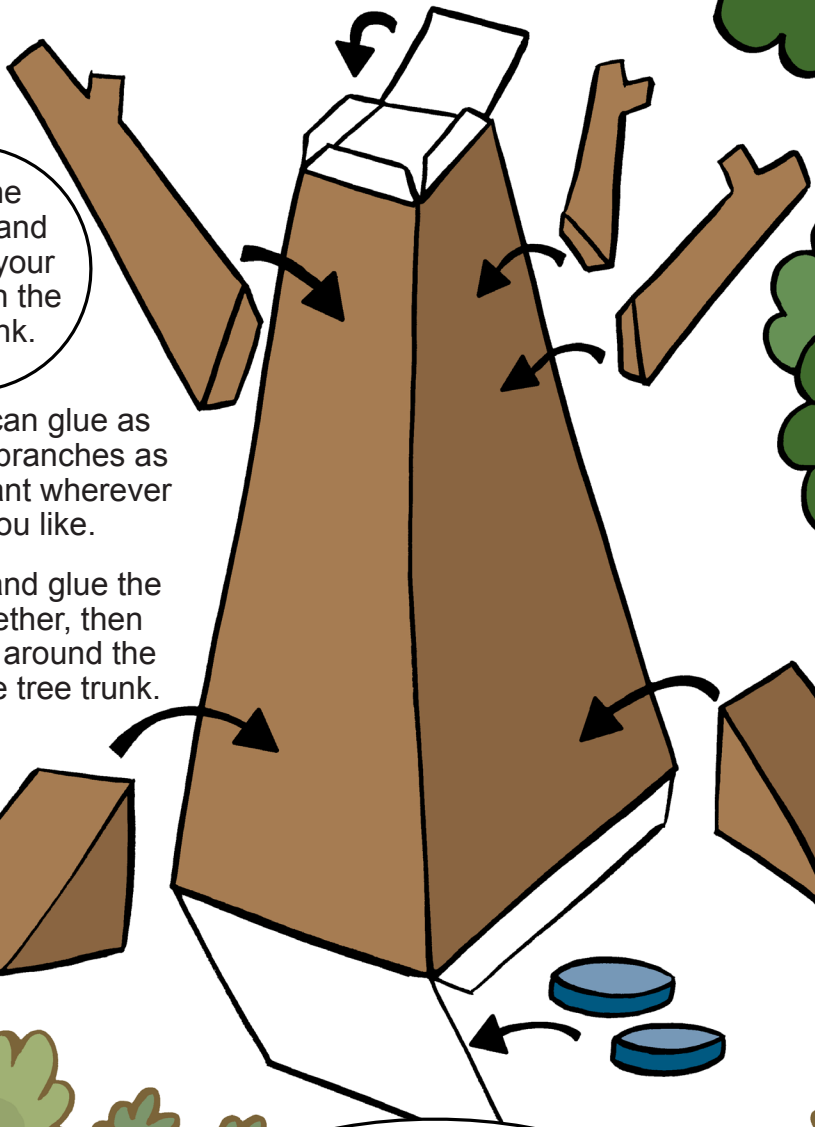
Next, cut a small slot on 2 pieces and insert them into each other, then glue the parts onto a branch.

You can put several pieces together to form a more compact foliage. See the photo on the cover for an example.

Cut a small slot on top of one and on the bottom of the other.



Fold the tabs up and position your branch on the tree trunk.



You can glue as many branches as you want wherever you like.

Cut, fold, and glue the roots together, then glue them around the base of the tree trunk.

You can also use different colors of paper, different shades of green, or of yellow and orange and brown for variety.

Glue a small coin or weight inside the base of the tree before gluing it together, to add weight and stability to the model.

Use a variety of shades of color paper to cut out and assemble as shown here to form grass and small bushes.
Try out and experiment different ways to get what you want. Look at the final photos of the model.
